

Aansluitschema LEDware LED spots

Set bestaat uit:

1. Driver dimbaar
2. aantal kabelsetjes
3. aantal spotjes

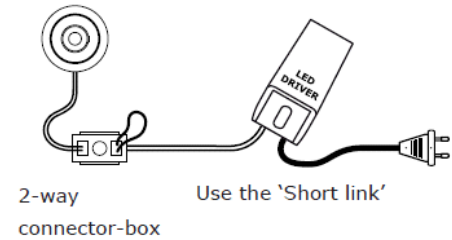

Attention: Always disconnect the mains of the driver before plugging or unplugging the LEDs.

The high voltage on the driver output (when no load is connected to the driver) will damage the LEDs.

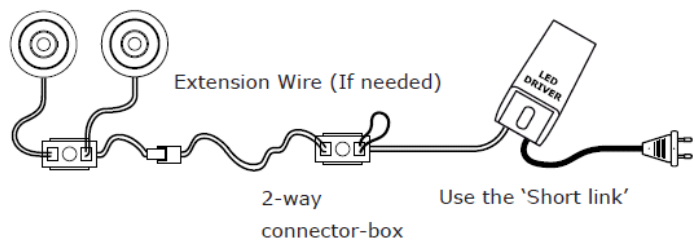

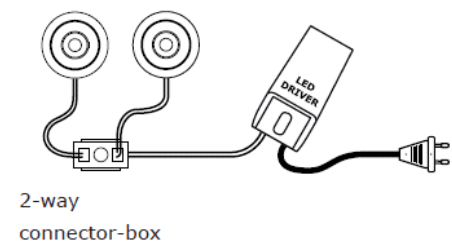

Use the 'Short link':

The LEDs are always connected in series, so you will need to close the circuit with an extra plug (Short link) when only one LED module is connected.

Max. cable length:

Extension wires can be used to extend the cable length where needed. The recommended **max.** cable length from the Driver to the last LED module is **10 meter**.
